**CLARIFICATION DU REGLEMENT RELATIF A L'EXTENSION DES DROITS
SUITE A UNE NOUVELLE ADHESION A L'ACCORD DE BANGUI****RESOLUTION N°47/32****LE CONSEIL D'ADMINISTRATION
DE L'ORGANISATION AFRICAINE DE LA PROPRIETE INTELLECTUELLE**

- Vu L'accord portant révision de l'accord de Bangui du 02 Mars 1977 instituant une Organisation Africaine de la Propriété Intellectuelle et ses annexes ;
- Vu Les dispositions des articles 18 et 19 dudit Accord relatives Aux attributions et pouvoirs du Conseil d'Administration ;

ADOpte la clarification du règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui ci-après :

Article 1er:

Le Règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui est réaménagé ainsi qu'il suit :

«Article 5 (nouveau):

Les titulaires des titres en vigueur à l'Organisation avant la production des effets de l'adhésion d'un Etat à l'accord de Bangui ou ceux dont la demande a été déposée avant cette date et qui

voudront étendre la protection dans ces Etats doivent formuler une demande d'extension à cet effet auprès de l'Organisation suivant les modalités fixées aux articles 6 à 18 ci-dessous.
Le renouvellement de la protection des titres qui n'ont pas fait l'objet d'extension avant l'échéance dudit renouvellement entraîne une extension automatique des effets de la protection à l'ensemble du territoire OAPI».

Le reste sans changement.

Article 2:

La présente clarification, qui entre en vigueur à compter du 1 er janvier 2008, s'applique aussi aux demandes d'extension en instance et sera publiée au Bulletin Officiel de l'Organisation.

Fait à Bangui le 17 décembre 2007

(57) La présente invention porte sur une composition chimique à usage dermatologique et aux propriétés antibactériennes obtenue à base d'une plante couramment appelée happy gardening ou Adam's apple et dont le nom scientifique est Taberneamontana crassa. Elle se présente sous la forme d'une pommade obtenue par le mélange du filtrat obtenu de l'extrait éthanolique total de Taberneamontana à d'autres excipients notamment e benzoate de sodium, la vaseline blanche, la glycérine pure, la lanoline et

l'eau purifiée. La pommade obtenue est efficace dans le traitement des infections dermatologiques notamment infections bactériennes de la peau et des muqueuses, pyodermies, furoncles et abcès après incision, folliculite de la barbe, ecthyma, impétigo, onyxis, pityriasis streptogènes, eczémas et dermatoses surinfectées, ulcère de la jambe, couverture antibactérienne locale dans les brûlures, brûlure par eau bouillante, plaies superficielles postopératoires et traumatiques.

(57) An apparatus, method, process, and system for the treatment of a water stream are provided. Such apparatus, method, process, and system characterized by applying a voltage to a pair of electrodes to generate an electric field with such electric field applied across a water stream passing there between the pair of electrodes. At least one of the pair of electrodes comprises a metal, and one or more of a plurality of positively charged ions in the water stream are substituted with one or more positively charged ions of the metal. Additionally, one or more of a plurality of negatively charged ions may react with the one or more positively charged ions of the metal to form an ionic compound. One or more of any remaining of the plurality of positively charged ions may react with another one or more of the plurality of negatively charged ions.

(57) An RFIC configuration for reduced antenna trace loss is disclosed. In an exemplary embodiment, an apparatus includes a primary RFIC and a secondary RFIC that is configured to receive analog signals from at least two antennas. The secondary RFIC is configured to process selected analog signals received from at least one antenna to generate an analog output that is input to the primary RFIC.

(57) The invention concerns an interface for cutting off the power supply for any fault current I_d \leq 300 milliamperes such that : $I_d > I_{PE} + kxI_h$. where I_{PE} represents the current returning to the power source via the protective conductor connecting the exposed conductive parts to earth and I_h (< 10 or 30 milliamperes) represents the current returning to the power source by means other than via the protective conductor or via an active conductor. Current I_h is therefore likely to travel through a person. In this way, the interface protects people and property against ground insulation faults and against certain direct contacts independently of the earth of the exposed conductive parts and of external conditions. It also protects people in the event of a failure in the protection of an area using the same earth in case of a fault.

(57) A system and method for three-dimensional measurement of surfaces. In one embodiment, a measurement system includes a laser projector, a first camera, and a processor. The laser projector is configured to emit a laser projection onto a surface for laser triangulation. The first camera is configured to provide images of the surface, and is disposed at an oblique angle with respect to the laser projector. The processor is configured to apply photogrammetric processing to the images, to compute calibrations for laser triangulation based on a result of the photogrammetric processing, and to compute, based on the calibrations, coordinates of points of the surface illuminated by the laser projection via laser triangulation.

(57) A coring system and method enable a single-trip operation for setting a deflector assembly, deploying a coring assembly and obtaining a core sample from a borehole drilled in a wellbore. The coring assembly has a barrel with a bore for collecting the core sample and has a coring bit coupled to an end portion of the barrel. The deflector system is arranged to deflect the coring bit into a side wall of the wellbore to drill the borehole therein. The deflector system includes a deflector and a collar. The collar, coupled to the deflector, restricts upward movement of the coring assembly relative to the deflector assembly. The

collar may also be used as a retrieval device to engage the coring assembly and permit removal of the coring assembly and the deflector assembly as well as the core sample after the core sample has been obtained.

(57) An identity document includes in a single plane a two-dimensional image and under optical means a ghost image for verifying the authenticity of the two-dimensional image. The ghost image is a stereo image and the stereo image is based on the two-dimensional image. The stereo image includes at least two images of the person on the identity card wherein at least one of the two images is a calculated image. The stereo image may further include a floating image, the floating image being arranged to be perceived to float over the ghost image.

(57) A drive system for driving a load (21) by means of a gas turbine (3). The gas turbine comprises a gas generator (5) having a gas-generator rotor (5R) and comprising at least one gas-generator compressor (9) and one high-pressure turbine (11) driving the gas-generator compressor. The gas turbine further comprises a power turbine (7) having a power-turbine rotor (7R), which is torsionally independent of the gas-generator rotor (5R). The load is connected to the power-turbine rotor (7R). The system further comprises an electric motor/generator (23) mechanically connected to the gas-generator rotor (5R) and electrically connected to an electric power grid (G). The electric motor/generator (23) is adapted to function alternatively : as a generator for converting mechanical power from the gas turbine (3) into electrical power; and as a motor for supplementing driving power to the load (21).

(57) La présente invention concerne un procédé de désextraction sélective du scandium vis-à-vis du thorium et/ou du zirconium et/ou du titane dissous dans une solution organique à base d'une aminé primaire d'alkyle caractérisé en ce qu'il comprend les étapes successives suivantes : - a) mise en contact d'une solution organique à base d'une aminé primaire d'alkyle dans laquelle sont dissous du scandium et un métal choisi parmi le thorium, le zirconium, le titane et leurs mélanges avec une solution aqueuse acide de sels de phosphate de façon à former un complexe entre le scandium et les phosphates, - b) séparation de la solution aqueuse comprenant le complexe entre le scandium et les phosphates, de la solution organique à base d'une aminé primaire d'alkyle, - c) récupération de la solution aqueuse comprenant le complexe entre le scandium et les phosphates. Il concerne en outre un procédé d'extraction sélective du scandium d'une solution aqueuse acide de sulfate contenant du scandium et un métal choisi parmi le thorium, le zirconium, le titane et leurs mélanges et un procédé d'extraction sélective du scandium, du thorium, du zirconium et éventuellement du titane d'une solution aqueuse acide de sulfate contenant du scandium, du thorium, du zirconium et éventuellement du titane à l'aide d'une solution organique à base d'une aminé primaire d'alkyle utilisant ce procédé de désextraction.

(57) The present invention relates to a savoury food concentrate comprising iron salt and a process to produce the same. It is therefore an aim of the present invention to provide a glutamate containing savoury food concentrate which comprises an iron salt, wherein the amount of off-color which appears upon storage of the food concentrate is reduced, preferably wherein off-coloring is absent. It is therefore a further object of the present invention to improve the bioavailability of iron in food concentrates. It was found that a composition comprising an iron salt and a further non-iron phosphate salt, provides reduced discolouration in food concentrate compositions comprising glutamate, and also provides improved bioavailability of the iron.
