**CODES UTILISES EN MATIERE DE DOCUMENTATION DES
BREVETS D'INVENTION ET DES MODELES D'UTILITE**

- (11) Numéro de publication.
- (12) Désignation du type de document.
- (19) Identification de l'office qui publie le document.
- (21) Numéro d'enregistrement ou de dépôt.
- (22) Date de dépôt.
- (24) Date de délivrance.
- (30) Pays dans lequel (lesquels) la(les) demande(s) de priorité a (ont) été déposée(s).
Date(s) de dépôt de la (des) demande(s) de priorité.

(le cas échéant)

- Numéro(s) attribué(s) à la (aux) demande(s) de priorité.
- (51) Classification internationale des brevets(CIB).
- (54) Titre de l'invention.
- (57) Abrégé.
- (60) Références à d'autres documents apparentés (le cas échéant).
- (71) Nom(s) du ou des demandeur(s).
- (72) Nom de l'inventeur (le cas échéant) suivi éventuellement du nom de la société d'appartenance.
- (73) Nom(s) du ou des titulaire(s) le cas échéant.
(Ce code n'apparaît que sur la première page du brevet délivré)
- (74) Nom du mandataire en territoire OAPI (le cas échéant).

**CODES UTILISES EN MATIERE D'INSCRIPTIONS
DANS LE REGISTRE SPECIAL DES BREVETS D'INVENTION ET DES
MODELES D'UTILITE**

- (1) Numéro d'enregistrement.
- (2) Numéro et date de dépôt.
- (3) Nature de l'inscription: le changement d'adresse ou de dénomination, la cession, la concession de licence, la renonciation, la fusion, le retrait, la radiation, le transfert, l'apport, l'annulation de la licence,l'extension des droits à un nouvel Etat membre...
- (4) Bénéficiaire de l'inscription ou pays bénéficiaire de l'extension.
- (5) Numéro de l'inscription.
- (6) Date de l'inscription.

**CLARIFICATION DU REGLEMENT RELATIF A L'EXTENSION DES DROITS
SUITE A UNE NOUVELLE ADHESION A L'ACCORD DE BANGUI**

RESOLUTIONN°47/32

**LE CONSEIL D'ADMINISTRATION
DE L'ORGANISATION AFRICAINE DE LA PROPRIETE INTELLECTUELLE**

Vu L'accord portant révision de l'accord de Bangui du 02 Mars 1977 instituant une Organisation Africaine de la Propriété Intellectuelle et ses annexes ;

Vu Les dispositions des articles 18 et 19 dudit Accord relatives Aux attributions et pouvoirs du Conseil d'Administration ;

ADOpte la clarification du règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui ci-après :

Article 1er :

Le Règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui est réaménagé ainsi qu'il suit :

«Article 5 (nouveau) :

Les titulaires des titres en vigueur à l'Organisation avant la production des effets de l'adhésion d'un Etat à l'accord de Bangui ou ceux dont la demande a été déposée avant cette date et qui

voudront étendre la protection dans ces Etats doivent formuler une demande d'extension à cet effet auprès de l'Organisation suivant les modalités fixées aux articles 6 à 18 ci-dessous.

Le renouvellement de la protection des titres qui n'ont pas fait l'objet d'extension avant l'échéance dudit renouvellement entraîne une extension automatique des effets de la protection à l'ensemble du territoire OAPI».

Le reste sans changement.

Article 2 :

La présente clarification, qui entre en vigueur à compter du 1 er janvier 2008, s'applique aussi aux demandes d'extension en instance et sera publiée au Bulletin Officiel de l'Organisation.

Fait à Bangui le 17 décembre 2007

(74) SCP AKKUM, AKKUM & Associates, Quartier Mbala II, Dragages, B.P. 4966, YAOUNDE (CM).

(57) The invention relates to a method for producing phosphoric acid, including: attacking phosphate rock by means of sulfuric acid between 70° and 90° C with formation of a first calcium sulfate dihydrate crystal slurry, the aqueous acid phase of said slurry having free P₂O₅ content between 38 and 50 wt% and free SO₃ content that is less than 0.5 wt% and greater than 0.05 wt%; converting said first slurry by means of heating at a temperature greater than 90° C, thus giving rise to a second slurry formed of calcium sulfate hemihydrate crystals; and, within the second slurry, separating a produced phosphoric acid, having a free SO₃ content that is less than 2%, and a calcium sulfate hemihydrate filter cake.

(57) The specification discloses a solar energy water treatment device (10) for minimizing bacteria and other pathogens in treatment water

supplied to the device (10), the device having an inclined metal surface (25) for receiving treatment water (34) via a supply pipe (37) at an upper end of the metal surface (25) for flow downwardly thereon in a thin surface flow, a clear or translucent solar energy transfer panel (14) being spaced above and adjacent to the metal surface (25) whereby solar energy passes to the water on the metal surface (25), and water collection means (28) at a lower end region of the metal surface (25) after passage thereon, the treatment water (34) flowing at a rate of between 0.1 and 2 litres/m²/min of the metal surface (25).

(54) Method for the removal and condensation of vapors.

(72) James W. PATTEN (US)

(73) Red Leaf Resources, Inc., 200 W. Civic Center Drive, Suite 190, SANDY, UT 84070 (US)

(74) FANDIO & PARTNERS CONSULTING (SCP), Mendong, Route du Palais de Justice, Place du Marché, face Stade Wembley, B.P. 12246, YAOUNDE (CM).

(57) A method for removal and condensation of vapors from within an enclosed space (120) is disclosed. An enclosed space (120) containing material (110) is surrounded by an insulative permeable layer (130) having a lowering temperature gradient (230) between the inner surface (220) and the outer surfaces (240). The insulative layer (130) may also be covered by an impermeable layer (140). Heating the material (110) in the enclosed space (120) causes the formation of vapors at a positive pressure within the enclosed space (120). Vapors pass through the inner surface (220) of the insulative permeable layer (130) and contact the permeable materials and are condensed by the lowering temperature within the insulative layer (130). The condensate liquid passes downwardly through the insulative layer (130) for collection. The positive pressure within the heated enclosed space (120) and the condensation and lowering of pressure and temperature within the insulative layer (130) serves to draw additional vapors from within the enclosed space (120) into the insulative layer (130) for condensation and collection.

(74) SCP AKKUM, AKKUM & Associates, Quartier Mballa II, Dragages, B.P. 4966, YAOUNDE (CM).

(57) This invention relates to a self-powered, portable facility 10 for facilitating learning or administration in remote underdeveloped areas. The facility 10 includes a portable structure in the form of a conventional shipping container 12, preferably a 40 ft (12.2m) container, including thermally insulated walls 16 which define an inner chamber configured to accommodate learners. The facility 10 further includes collapsible solar panels 24a mounted to a roof 18 of the structure for converting solar energy into electrical energy, a power storage device such as a battery pack 42, also known as an uninterrupted power supply (UPS), and a wireless communication arrangement operable to communicate via a wireless network. The facility 10 includes a number of workstations for accommodating pupils, each workstation including a notebook computer 51. The facility 10 has internet connectivity via a wireless modem.

(54) Citerne à caoutchouc bord-champ.

(72) LATT Gnagne Jérôme (CI)

(73) LATT Gnagne Jérôme, 01 B.P. 12121, ABIDJAN 01 (CI).

(57) L'invention concerne une citerne à caoutchouc destinée au stockage, à la sécurisation et à la protection du caoutchouc bord-champ.

La citerne est constituée de plusieurs panneaux identiques et repose sur un support métallique doté de trous de fixation.

Un couvercle, en forme de cloche constitue le système de fermeture au moyen de serrures de sûreté.

Une portière permet l'évacuation du caoutchouc.

(11) 15969

(54) Spatule à coco.

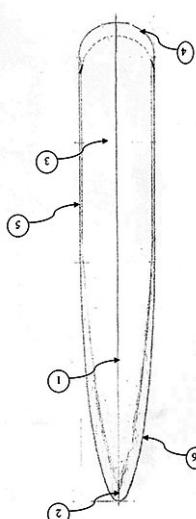

(72) MASSIDA Charles Dominique (CI); KOUAME Anoh Pierre (CI); TAKOUO Gnépa David (CI).

(73) MASSIDA Charles Dominique, 26 B.P. 1000, ABIDJAN 26 (CI); KOUAME Anoh Pierre, 26 B.P. 1000, ABIDJAN 26 (CI); TAKOUO Gnépa David, 26 B.P. 1000, ABIDJAN 26 (CI)

(57) La présente invention concerne une spatule pour décoller l'amande de coco de la paroi interne de la coque.

Elle est en matière plastique, souple, avec une partie fuselée (1) à pointe arrondie (2) et l'autre droite (3) aux bords chanfreinés ou 1/2 rond (5) et son extrémité (4) arrondie et évasée. Cette extrémité (4), le talon, est affutée sur une seule face (verso). La partie droite (3) représente le manche de l'instrument lorsque la partie fuselée, lame (1) sert à séparer l'amande de la coque. Elle (4) fait office de pelle-cuillère pour creuser et raceler l'amande tendre du coco frais.

La partie fuselée (1) de la spatule est affutée sur les deux bords latéraux (6) (face recto).

(54) La canne à semer.

(72) KOUADIO Kouakou Yves (CI)

(73) KOUADIO Kouakou Yves, 04 B.P. 2813, ABIDJAN 04 (CI).

(57) L'invention concerne une canne à semer des grains de semence.

Elle comprend le bol gradué (A); la boîte (B) et la tige (C) solidaires les unes des autres par les joints (14) et (15).

Le bol gradué (2) contient les grains à semer. On se déplace dans le champs en piquant le sol à intervalles réguliers avec la pointe (12) de la canne à semer que l'on tient par le poignet (5). A chaque coup de canne sur le sol, on actionne la gâchette (6) qui pousse le tube creux (17) vers le haut par l'intermédiaire du bouton coulissant (18). Celà libère l'ouverture supérieure du tube sélectionneur (4) de l'entonnoir (3) par laquelle va être sélectionner quelques grains. Le système de rappel (21) est chargé de rappeler la gâchette (6) à sa position initiale.

On actionne aussitôt après, la boucle coulissante (7) qui va tirer sur la lèvre (13) de la pointe (12) et l'ouvrir par l'intermédiaire d'un fil de fer (8). Les graines sélectionnées vont être libérées en terre et la lèvre (13) va être rappelée au repos grâce au ressort (22).

(57) The invention relates to a method for restoring information on a screen of a terminal

including a display space, on which a graphic object is displayed in an initial representation. According to the invention, such a method includes: a step of obtaining at least one datum for tilting said terminal relative to a plane of reference; a step of selecting at least one piece of information, from among a plurality of information to be restored, on the basis of said obtained tilting datum, thus outputting at least one selected piece of information; a step of converting said initial representation into a modified representation that includes said at least one selected piece of information; and a step of restoring said modified representation of said graphic object.

picture elements, spaced at a mutual distance δ , applying the images in an interlaced manner on an image layer in sets of interlaced arrays $(I_{11}, I_{21} \dots I_{m1}), \dots, (I_{1n}, I_{2n} \dots I_{mn})$ below a lens structure comprising line-shaped lens elements over the image layer with one line shaped lens element overlying a corresponding set of adjacent arrays, characterised in that upon applying the arrays onto the image layer, and/or upon providing the lens elements, each array of picture elements is provided onto the image layer in an out of focus manner to form a blurred array or each array is imaged by the lens elements to form a blurred array, wherein a mutual distance of the edges of adjacent blurred arrays is smaller than the mutual distance δ .

(57) An arrangement of elements which are used to restrain and deflect a pipe specimen to a prescribed form with precisely controlled loads. A rigid frame includes a movable pipe bending form to which one end of a pipe specimen is connected and a rotating table to which the second end of the pipe specimen is connected. Means for assessing the drive torque used to draw the specimen over the pipe bending form is provided in the form of a load cell. The rotating table is used in combination with a travelling pipe end truck foundation to generate a bending moment in

the pipe specimen in the same plane as the pipe specimen is being bent by the pipe bending form. By the use of precise loads on the pipe specimen, computer analysis of the simulated reeling of the given pipe construction will produce predictions of the reeling tension, shear, and bending moment in the pipe at the point of the travelling pipe end as this point on the pipe approaches contact with the reel.

(57) The present invention relates to vaccines of DNA that code for specific viral sequences. The DNA vaccines against yellow fever according to the invention are based on the sequence that codes for the yellow fever virus envelope protein (p/YFE). Besides the wild p/YFE construct, sequence E was also fused with the sequence that codes for the human lysosome-associated membrane protein (h-LAMP), generating the construct (pL/YFE). The results of the invention are considered to be very promising, since both constructs can induce T-cell response against the same epitopes induced by the 17DD vaccine, and the pL/YFE construct can also induce a satisfactory concentration of neutralising antibodies. The pL/YFE vector was inoculated in mice, before intracerebral challenge with the virus of yellow fever. Surprisingly, 100% of the mice immunised with pL/YFE survived the challenge.

(57) A wear assembly for use on various kinds of earth working equipment that includes a base with a supporting portion, a wear member with a cavity into which the supporting portion is received, and a lock to releasably secure the wear member to the base. The supporting portion is formed with top and bottom recesses that receive complementary projections of the wear member. The recesses and projections include aligned holes so as to receive and position the lock centrally within the wear assembly and remote from the wear surface. The hole in the wear member is defined by a wall that includes a retaining structure provided with an upper bearing surface and a lower bearing surface for contacting and retaining the lock against upward and downward movement in the hole. The lock includes a mounting component that defines a threaded opening for receiving a threaded pin that is used to releasably hold the wear member to the base. The separate mounting component can be easily manufactured and secured within the wear member for less and higher quality than forming the threads directly in the wear member.

(57) The invention relates to a reflector for uniaxially concentrating thermal solar collectors, comprising an elastic panel and a means that introduces the oppositely directed bending moments from two opposite sides into the panel. The invention further relates to a receiver for

highly concentrating thermal solar collectors, said receiver being arranged inside a protective casing, wherein the protective casing is radiopaque and has an opening that is sealed air-tight, through which opening the radiation can penetrate into the interior of the protective casing. One aspect of the invention relates to a sensor for uniaxially and biaxially concentrating thermal solar collectors, said sensor having a hollow body, in which a photoelectric cell is arranged and which has an opening, in which a transparent scattering element is arranged, wherein the outside of the hollow body is reflective to radiation.

(57) A valve assembly for regulating fluid flow in a horizontal wellbore. A housing can be coupled to a production tubular. A chamber is defined within the housing and can be in fluid communication through a flow channel with an inner annulus formed adjacent the wellbore. A piston and a biasing member can be disposed within the chamber, where the biasing member biases the piston into a first position. A flowpath is defined within the housing and communicable with both the production tubular and the inner annulus. The flowpath can include one or more nozzles disposed therein, and the piston can be configured to move between the first position allowing fluid flow through the flowpath to the

production tubular and a second position preventing fluid flow to the production tubular.

(74) Cabinet ÉKÉMÉ LYSAGHT SARL, B.P. 6370, YAOUNDE (CM).

(57) The present invention concerns a security thread or stripe for the incorporation into or onto a value-document or currency substrate, as well as a method and means of making such thread or stripe. The thread or stripe comprises a plastic foil which carries a hardened coating comprising oriented magnetic or magnetizable pigment particles, the orientation of said pigment particles representing graphic information. Preferred are optically variable magnetic or magnetizable pigment particles. Said hardened coating may also be comprised between a first and a second plastic foil. Said graphic information is a repetitive seamless pattern of suitable repetition length, which is produced using a magnetic orienting cylinder having a corresponding repetitive seamless magnetic field pattern. A magnetic orienting cylinder and a process for producing such magnetic orienting cylinder are also disclosed. The process comprises the

coating of a cylindrical support body with a polymer material comprising a high-coercivity permanent-magnetic powder as a filler material, and magnetizing or engraving the seamless outer cylinder surface to form on the cylinder a repetitive seamless magnetic field pattern.

(57) A method of block cave mining comprising excavating undercut tunnels (21) at an undercut level; drilling undercut blast holes (25) through the undercut tunnel roofs and setting and detonating explosive charges in those holes to blast rock above the undercut tunnels to initiate the formation of broken rock caverns (26) above the undercut tunnels (21); excavating extraction level tunnels (22) at an extraction level below the undercut level; drilling drawbell blast holes (33) upwardly from the extraction level tunnels at selected drawbell locations toward the broken rock caverns (26) and setting and detonating explosive charges in those holes to blast drawbells (32) through which broken rock falls down into the extraction level tunnels (22); and progressively removing such fallen rock from the drawbell locations through the extraction level tunnels (22); wherein some of the excavation is done mechanically by tunnel boring machinery.

(74) SCP AKKUM, AKKUM & Associates, Quartier Mballa II, Dragages, B.P. 4966, YAOUNDE (CM).

(57) A distilled water production system (1) includes a main tank (2), a pressure reducer (3), a cooler (4) and a pool (5). Sea water or dirty water is contained in the main tank (2) as raw water for producing distilled water. The pressure reducer (3) brings an inside of the main tank (2) into a reduced pressure state. The cooler (4) is disposed in an upper part within the main tank (2) and cools water vapor produced by evaporation of the raw water occurring in the reduced pressure state. The pool (5) is disposed at a position below the cooler (4) within the main tank (2) and contains the distilled water obtained by cooling and condensation of the water vapor by the cooler (4). According to the distilled water

production system (1), the running cost and construction and equipment costs can be suppressed to be low.

(57) A system for separating solids from fluid including a solid-laden fluid including a base fluid, a first separator configured to receive the solid-laden fluid and separate the fluid into a solids portion and an effluent, and a membrane separator configured to receive the effluent and separate the effluent into a permeate and a concentrate is disclosed. A method for separating solids from fluid including obtaining a solid-laden fluid, wherein the solid-laden fluid comprises a base fluid, feeding the solid-laden fluid through a centrifuge, removing at least a portion of high gravity solids from the solid-laden fluid, flowing the solid-laden fluid through a membrane separator, removing at least a portion of low gravity solids from the solid-laden fluid, and

collecting a permeate from the membrane separator is also disclosed.
