**CLARIFICATION DU REGLEMENT RELATIF A L'EXTENSION DES DROITS
SUITE A UNE NOUVELLE ADHESION A L'ACCORD DE BANGUI****RESOLUTIONN°47/32****LE CONSEIL D'ADMINISTRATION
DE L'ORGANISATION AFRICAINE DE LAPROPRIETE INTELLECTUELLE**

- Vu L'accord portant révision de l'accord de Bangui du 02 Mars 1977 instituant une Organisation Africaine de la Propriété Intellectuelle et ses annexes ;
- Vu Les dispositions des articles 18 et 19 dudit Accord relatives Aux attributions et pouvoirs du Conseil d'Administration ;

ADOpte la clarification du règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui ci-après :

Article 1er:

Le Règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui est réaménagé ainsi qu'il suit :

«Article 5 (nouveau):

Les titulaires des titres en vigueur à l'Organisation avant la production des effets de l'adhésion d'un Etat à l'accord de Bangui ou ceux dont la demande a été déposée avant cette date et qui

voudront étendre la protection dans ces Etats doivent formuler une demande d'extension à cet effet auprès de l'Organisation suivant les modalités fixées aux articles 6 à 18 ci-dessous.
Le renouvellement de la protection des titres qui n'ont pas fait l'objet d'extension avant l'échéance dudit renouvellement entraîne une extension automatique des effets de la protection à l'ensemble du territoire OAPI».

Le reste sans changement.

Article 2:

La présente clarification, qui entre en vigueur à compter du 1 er janvier 2008, s'applique aussi aux demandes d'extension en instance et sera publiée au Bulletin Officiel de l'Organisation.

Fait à Bangui le 17 décembre 2007

(57) The present invention relates to a marking of polymeric liquid crystal material having determined optical characteristics allowing its authentication and reading by a machine and its authentication by the human eye. The marking is applied onto an item, good or article by a variable information printing process. The marking is in the form of indicia representing a unique code which allows for an easy authentication by the human eye and a secure tracking and tracing of the marked item, good or article throughout its life cycle.

(57) The present invention relates to compounds defined by formula I,

wherein the variables R¹, R², R³, R⁴, and m are defined as in claim 1, possessing valuable pharmacological activity. Particularly, the compounds are inhibitors of 11 β -hydroxysteroid dehydrogenase (HSD) 1 and thus are suitable for treatment and prevention of diseases which can be influenced by inhibition of this enzyme, such as metabolic diseases, in particular diabetes type 2, obesity, and dyslipidemia.

(57) The present invention relates to an agomelatine hydrochloride hydrate of formula I, preparation and use thereof, and to pharmaceutical composition containing it. The agomelatine hydrohalide hydrate obtained through the present method has significant increased solubility than that agomelatine, and therefore is more suitable for manufacturing pharmaceutical formulations. In addition, the product enjoys higher stability and purity. Using the present method, product of high purity can be obtained through a simple process, free of any complicated steps.

 (74) Cabinet ISIS CONSEILS (SCP), B.P. 15067, YAOUNDE (CM).

(57) A bipolar overvoltage battery pulser and method are provided that apply a positive pulse voltage and a negative pulse voltage alternately across the terminals of a battery. The object of the bipolar overvoltage battery pulser and method is to increase the cycle lifetime and capacity of storage batteries, such as lead acid batteries. The rise times for the leading edges of the positive pulses and for the trailing edges of the negative pulses are short compared to ionic relaxation time in the electrochemical solution. Alternating between the positive and negative pulses gives each new pulse an equal starting conditions without realizing any memory effect that otherwise may result if the last applied pulse was of the same polarity, which reduces the extent of overvoltage that may be applied to the battery and decrease the highest useable pulse cycling frequencies that could be achieved without experiencing pulse overlapping. The shape, type and timing of the pulses may be adjusted to create overvoltage pulses having high duration and amplitude.

par voie de conséquence du bien être des populations.

(73) Monsieur Thierno Mamadou Djouldé BALDE, Quartier Ratoma, Secteur Kakimbo, S/C Amadou BARRY, B.P. 5323, CONAKRY (GN).

(57) La présente invention porte sur une machine destinée à repasser par tapage les tissus en Basin. Elle est composée d'un moteur électrique ou thermique (1) d'une table de repassage (11) d'un système de transmission par poulie (3) d'une roue (6) d'un mécanisme d'entrainement du ou des bras (13) des pilons (10) et repose sur un bâti (15). Le fonctionnement de la machine est assuré par le moteur (1) qui, une fois mis en marche, entraîne dans sa rotation le système de poulie (3) à l'aide de la courroie (2). La roue (3) est elle aussi reliée à l'autre roue (6) à l'aide de la courroie (4). La roue (6) conduit au mouvement alternatif du bras (13) qui à sa descente donne des coups sur la table (11) en permettant de taper sur le tissu Basin entreposé entre le pilon et cette table qui assure le repassage. Pendant le fonctionnement de la machine l'opérateur expose les surfaces à taper de manière à obtenir un

repassage uniforme et un éclat désiré sans pour autant détériorer le tissu.

(72) M. GBEKPON Sevi Samuel N'guessan.

(73) M. GBEKPON Sevi Samuel N'guessan, S/c M. LEE Jund Do, 08 B.P. 2589, ABIDJAN 08 (CI).

(57) L'invention concerne un objet destiné à la protection de la tasse de latex d'hévéa contre les eaux de pluie. Ce dispositif comprend une fixation (1, 2, 3) qui permet de le fixer et de l'adapter à l'arbre avec une bonne étanchéité et une protectrice (4, 5) de la tasse à latex. Il a l'avantage de permettre la saignée de l'hévéa en toute saison sans inquiétudes et de produire du latex constamment au cours de l'année.

(57) A technique facilitates performance of a treatment application in a lateral wellbore. The technique may be employed in an open lateral wellbore and comprises deploying a completion within the open wellbore wall of the lateral wellbore. A service tool is used in cooperation with the completion to perform a gravel packing or other well treatment operation while maintaining hydrostatic pressure on the open lateral wellbore to prevent collapse of the open lateral wellbore. A variety of features may be incorporated into the completion or used in cooperation with the completion to facilitate the well treatment operation while maintaining the hydrostatic pressure until completion of the desired gravel pack.

(57) A method is disclosed for determining a mechanical performance parameter of a structure in which damage has caused a wall of the structure to change from an initial shape to a damaged shape. The method comprising performing measurements for geometrically characterizing an external surface of the damaged shape; modeling a test body comprising a surface substantially identical to the external surface of the damaged shape in the given area wherein the test body matches the external surface of the damaged shape; modeling a test wall having a portion of a shape substantially identical to the initial shape; calculating a deformed test wall and a stress state related to the deformation, the deformation (8a) of the test wall being caused by a relative displacement of the test body and the test wall, the relative displacement being configured to give the deformed test wall an external surface substantially identical to the external surface of the damaged shape; and evaluating mechanical performance of the deformed test wall.

(57) The present invention provides a power generator which can obtain efficient power generation by changing magnetic force acting on electromotive coils. The power generator is provided with a first permanent magnet member 1, a second permanent magnet member 2, and an electromotive coil member 3 arranged concentrically to have a telescoping structure and is configured so that power generation in the electromotive coil member 3 is induced by rotating the first permanent magnet member 1 or/and the second permanent magnet member 2. In the power generator, the first and second permanent magnet members 1 and 2 cooperate with each other to change the magnetic force and, thus, to obtain efficient power.

(57) L'invention concerne un dispositif de pivotement de la lisse de barrière permettant de gérer les accès des véhicules dans différents endroits (entrée de parking, autoroutes à péages, passage à niveau). C'est un périphérique externe qui se monte directement sur la plaque de l'arbre moteur de la barrière. Le support est composé de deux parties: - la partie fixe sur laquelle sont montées des pièces mécaniques et qui permet de fixer le support sur la barrière. - la partie mobile est une articulation sur laquelle deux bries métalliques permettent de serrer la lisse. L'une des innovations majeures est la réalisation d'un support en deux parties dont l'une mobile contenant la lisse pouvant pivoter dans le sens de circulation jusqu'à 90°. L'invention permet d'éviter les brisures fréquentes des lisses, des manchons, mais aussi de supprimer totalement l'utilisation des vis de fixation en nylon ou des colliers de fixation connues.

(57) The invention concerns a reactor 30, 50 for use in a clarifier 10 of a water treatment system. The reactor 30 includes a body 32 for receiving a stream of wastewater from a feed line 16 of the clarifier. The body 32 has a first opening 38.1 which is, in use, an upper opening through which clarified water is released and second opening 38.2 which is, in use, a lower opening through which slurry is dispensed. The wastewater stream introduced into the body 32 is accelerated by using acceleration means 34, in particular a venturi located below the outlet 18 of the feed line 16. A diverting formation 36 is further positioned in line with the accelerated stream of wastewater so that the wastewater stream strikes the diverting formation after having been accelerated. The invention also concerns a clarifier 10 including a reactor 30, 50 as well as a method of clarifying wastewater in a reactor 30, 50 of the clarifier 10.

(57) La Falentine est une nouvelle molécule dérivée de l'adamantane. L'invention, plus particulièrement porte sur la molécule Tricyclo [3.3.1.1.(3,7)] décane-1-acide carboxylique, 3-méthylphénylester, ses procédés de synthèse, ses cibles biologiques, ses utilisations en cosmétique, en pharmaceutique et en médecine, ses formulations, son dosage, et ses indications thérapeutiques. De façon spécifique la Falentine est un activateur de sirtuines, de la sirtuine 6 précisément et dont la formule chimique est C₁₈H₂₂O₂ et la formule semi-développée comme mentionné dans la description. Les activateurs de la sirtuine 6 sont potentiellement d'intérêt en cosmétique et en thérapeutique,

car utiles dans le traitement et la prise en charge de pathologies diverses, liées aux stress, au vieillissement, à la réparation de l'ADN, à la maintenance des télomères, à la glycolyse et à l'inflammation.

(57) Disclosed in the present invention is a method of generating high speed airflow, which attributes to the method of converting thermal energy or fluid energy into mechanical energy. Utilizing a device comprised of an air pipe (1), a circulating pipe (2) and a starting and controlling system (3). The starting and controlling system (3) is comprised of one or combination of any two or more of a refrigerator (4), a circulating pump (5) and a heat exchanger (6). The method comprises the following steps: filling the device with a media; activating the starting and controlling system (3); after pressurized under liquid state, the media absorbing heat and gasified, and entering the air pipe (1), and generating high speed airflow. The method provides a method of utilizing low quality heat source to convert low speed airflow into high speed or extremely high speed airflow. Utilizing the method of generating high speed airflow in the present invention, the thermal energy carried by the flow in the nature is converted into mechanical energy efficiently.

(57) A pressurized transport oxy-combustor with different configurations is disclosed. Substantially pure oxygen is fed to the transport oxy-combustor under pressure to combust fossil fuels, generating steam for power generation. The end product is the flue gas containing substantially pure CO₂ after moisture condensation. The low excess oxygen necessary to achieve complete combustion in the combustor is scavenged by adding another fuel so that substantially all oxygen fed to the combustor is completely consumed. The capability to operate the transport oxy-combustor as a circulating fluidized bed combustor at very high solids circulation rates makes it unnecessary to use recycled CO₂ or flue gas as a means to moderate and control the combustion temperature. The temperature in the combustor is effectively controlled by relatively cooler circulating solids that enter the combustion zone (200). A small amount of CO₂ is recycled for aeration and to convey solids fuel to the combustor.

(57) This document provides conductive patterns, electrical sensors including conductive patterns, and methods of making conductive patterns used in electrical sensors. In some cases, the conductive patterns can define one or more microelectrodes. For example, thermal transfer printing techniques are described. In some cases, a microfluidics device can include one or more microelectrodes in a micro-channel.

(57) A point-of-care, screening kit for use by a health care worker to create custom test strips for screening the bodily fluids of an individual for various, medical conditions includes: (a) a plurality of reagents (12), (b) a substrate (18) configured to: i) receive one of the reagents and react with it so as to cause it to acquire a first characteristic color, and, ii) upon the addition of the individual's bodily fluid to the substrate, acquire, as a result of the formulation of each of the reagents, a second, dichotomous characteristic color when the individual has a specific one of the various, medical conditions. This kit also includes: (c) a plurality of containers (10) having indicia (26) that are reflective of the reagent within the container and which of the various medical conditions is being screened for with the use of the container and the characteristic first and second colors which are indicative of the individual having a screened for medical condition, and (d) one of the reagents being a protein reagent that includes appropriate quantities of: water, isopropyl alcohol, citric acid monohydrate, sodium citrate tribasic monohydrate, tetrabromophenol blue and tartrazine.

(57) A method of verifying swelling of a swellable material in a well can include connecting a transmitter to a sensor which senses a parameter indicative of degree of swelling of the swellable material, and conveying a receiver into an interior of a tubular string. The transmitter transmits to the receiver an indication of the degree of swelling of the swellable material. A packer swelling verification system can include a swellable material which swells in a well, and a well tool which is conveyed to the packer in the well. The well tool receives an indication of a degree of swelling of the swellable material. A method of verifying whether a swellable material has swollen in a well can include positioning a conductor proximate the swellable material, whereby the conductor parts in response to swelling of the swellable material, and detecting whether the conductor has parted.

(57) The invention relates to a system and method for the rail-bound transportation of objects, e.g. for delivering or collecting material to and/or from railway working vehicles, comprising several interconnected railway carriages (1), which respectively comprise at least one conveyor track (6, 7) on which the objects can be driven in a longitudinal manner in relation to the railway carriages (1) and which are designed such that the conveyor tracks (6, 7) join together the interconnected railway carriages (1). According to the invention, said system comprises conveyor bodies (8) for the objects, said bodies being designed to move from one railway carriage (1) to another railway carriage (1) along the conveyor tracks (6, 7) which are connected one to the other. The invention also relates to suitable railway carriages therefor.

(57) A top drive-pumpable cement head is provided for cementing a casing into a wellbore comprising a top sub portion with a top drive connection connectable to a top drive shaft to receive cement and impart translational and rotational forces to the casing simultaneously during cementing, and a ball launching assembly for housing and launching one or more launching balls. A bottom sub portion comprises a casing sleeve for housing one or more hollow wiper plugs and a tattle tale wire. The cement head also comprises a hammer union. The ball launching assembly is pre-loadable with the launching balls, the bottom sub is pre-loadable with the one or more hollow wiper plugs and a tattle tale wire and the top sub and the bottom sub are connectable via the hammer union for storage, prior to cementing operations. A method is also provided for assembling a cement head for completing a casing in a wellbore.

(57) An on-road energy conversion and vibration absorber apparatus receives the kinetic energy from moving vehicles (100) and pedestrians when being weighed down, and converts the received kinetic energy into a potential energy using a restorable elastic element (218) compressing a fluid thereby storing the potential energy in a pressure chamber (210), and then conducts the pressurized fluid to pass through a check valve (250) along a conduit (260) and drive a vane wheel (400) by releasing its potential energy. The vane wheel (400) in turn drives a generator (500) to generate electric energy, and the vibration of the vehicles (100) is alleviated by cushion effect provided by the apparatus.

- (57) This invention contains many methods that will change the earth into another earth and will be protect the areas threatened by the desertification and bareness. 1. Anti-desertification is an important issue and desertification is a catastrophe in many countries especially in the Arab countries. Lands should be fertilized. 2. Human stabilization is an obligation. 3. Desert areas could and should be transformed into water reservoirs. 4. The invention allows for thousands of jobs and will counter exodus. 5. Crops will be guaranteed, including in draught years. Biological products can be obtained and exported. 6. Energy generation will find new resources in the invention. 7. The invention development will allow for the cancel or at least lightening of the costly desalination stations. In this case it's possible now, to struggle against desertification and the shortage of waters. In the end, I hope that I have provided an answer which is enough to simplify the explanation of my theory of invention.
